STUDIES RELATED TO WILDERNESS

The Wilderness Act (Public Law 88-577, September 3, 1964) and related acts require the U.S. Geological Survey (USGS) and the U.S. Bureau of Mines to survey certain areas on Federal lands in order to determine the mineral values, if any, that may be present. Results must be made available to the public and be submitted to the President and the Congress. This report presents the analytical results of a geochemical survey of the Buzzard Knob Roadless Area (08-223) in the Chattahoochee National Forest, Rabun and Towns Counties, Ga. The area was classified as nonwilderness during the Second Roadless Area Review and Evaluation (RARE II) by the U.S. Forest Service, January, 1979.

Abstract

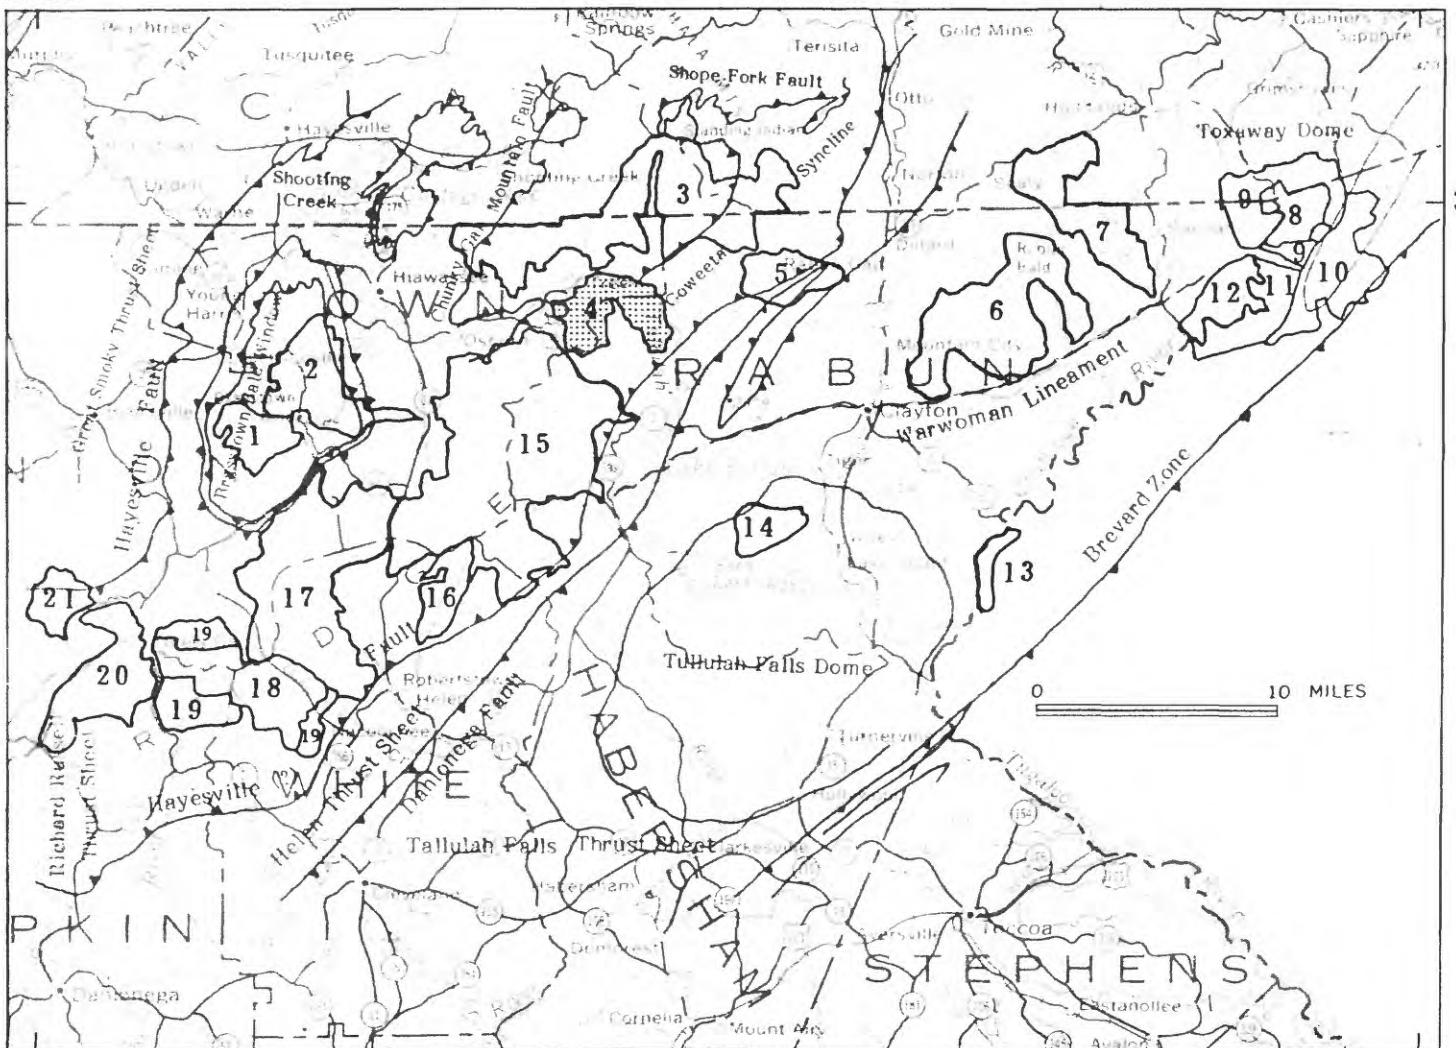

Semiquantitative spectrographic analyses for 31 elements on 30 stream-sediment, 22 panned-concentrate, 71 soil, and 72 rock samples from the Buzzard Knob Roadless Area, Rabun and Towns Counties, Ga., are reported here in detail. Atomic-absorption analyses for zinc in most samples and for gold in selected samples are also reported. Brief descriptions are given of rock samples analyzed, which include metamorphic and igneous rocks. Sample locations are given in Universal Transverse Mercator (UTM) coordinates.

INTRODUCTION

The analyses presented in this report (Table 1) are of 30 stream-sediment, 22 panned-concentrates, 71 soil, and 72 rock samples from the Buzzard Knob Roadless Area, Ga. (Fig. 1). These were collected by F. G. Lesure, J. P. D'Agostino and J. A. Goss in April 1985. Stream sediment samples were collected from most of the small drainage basins in the study area.

8. Ellicott Rock Wilderness

Figure 1.-- Index map showing locations of wilderness and roadless areas and major structural features in northeastern Georgia and adjacent North and South Carolina. The Buzzard Knob area is stippled. Number after roadless name is Forest Service identification number.

These represent several handfuls, randomly collected, of the finest sediment available at the sample site in the stream. A heavy mineral sample from coarser sediment was taken at 22 sites by panning one or more panfuls of gravel using a 14 in. standard gold pan. After air drying at room temperature, the remaining light minerals, mostly quartz and feldspar, were removed from the panned concentrate using bromoform (specific gravity 2.8). Magnetite was removed using a hand-held magnet and discarded. The remaining concentrate was analyzed without further preparation. Rock samples analyzed are described briefly in a separate section of this report. All are chip samples taken across bedding or layering over a measured thickness of representative material from outcrops or road cuts. The samples are representative of the major rock types exposed in the area. Some of the rock is partly weathered, but generally the freshest material available was sampled. The soil samples are grab samples from the A₂ or upper B soil zone, just below the dark, organic-rich surface soil (A₁ zone). Soils were dried, sieved to minus 80-mesh (0.007 in. or 0.177 mm), and then pulverized to minus 140-mesh (0.004 in. or 0.105 mm). Maps showing sample localities and discussion of the results of the analytical work are given by Peper and others (in press).

ANALYTICAL TECHNIQUES

Each sample was analyzed semiquantitatively for 31 elements by means of a six-step, D.C. (direct-current) arc, optical-emission spectrographic method (Grimes and Marranzino, 1968) by R. T. Hopkins and M. S. Erickson in the USGS laboratories, Denver, Colo. In addition, most of the samples were analyzed for zinc by an atomic-absorption technique (Ward and others, 1969, p. 20) by M. A. Pokorny, USGS laboratories, Denver, Colo. The panned-concentrate samples and 5 rock samples were analyzed for gold by atomic absorption methods by T. A. Roemer and C.A. Huyck (Thompson and others, 1968). The semiquantitative spectrographic values are reported as six steps per order of magnitude (1, 0.7, 0.5, 0.3, 0.2, 0.15 or multiples of ten of these numbers) and are approximate midpoints of geometric brackets whose boundaries are 1.2, 0.83, 0.56, 0.38, 0.26, 0.18, 0.12, etc. The expected precision is within one adjoining reporting interval on each side of the reported value 83 percent of the time and within two adjoining intervals 96 percent of the time (Motooka and Grimes, 1976).

The visual lower limits of determination for the 31 elements that were determined spectrographically are as follows:

For those given in percent:

Calcium	0.05	Magnesium	0.02
Iron	0.05	Titanium	0.002

For those given in ppm:

Antimony	100	Molybdenum	5
Arsenic	200	Nickel	5
Barium	20	Niobium	20
Beryllium	1	Scandium	5
Bismuth	10	Silver	0.5

Boron	10	Strontium	100
Cadmium	20	Thorium	100
Chromium	10	Tin	10
Cobalt	5	Tungsten	50
Copper	5	Vanadium	10
Gold	10	Yttrium	10
Lanthanum	20	Zinc	200
Lead	10	Zirconium	10
Manganese	10		

Rock sample descriptions

- GA04-
021R 1 m chip sample, quartz-feldspar-biotite gneiss, medium-gray, fine-grained, migmatitic, minor quartz veins.
- 022R 1 m chip sample, quartz-feldspar-biotite gneiss, medium-gray, fine-grained, migmatitic.
- 023R 1 m chip sample, hornblende-feldspar gneiss, partly saprolite.
- 026R 1 m chip sample, quartz-feldspar-biotite gneiss, light- to medium-gray, fine-grained, migmatitic.
- 060R 0.15 m chip sample, mica schist.
- 061R 1 m chip sample, alteration and contact zone between amphibolite, mica gneiss, and vein quartz.
- 062R 1 m chip sample, amphibolite, weathered, minor vein quartz.
- 063R 0.3 m chip sample, mica schist.
- 064R Composite sample, hornblende gneiss float.
- 067R 1 m chip sample, mica schist and vein quartz.
- 068R 1.3 m chip sample, mica schist.
- 069R 0.6 m chip sample, biotite gneiss.
- 102R 1 m chip sample, vein quartz, white.
- 103R 0.3 m chip sample, mica schist, minor magnetite and garnet, medium-gray, medium-grained.
- 105R Composite sample of six boulders of vein quartz.
- 106R 3 m chip sample, vein quartz, minor limonite after sulfides(?) along wall of vein.
- 109R 1 m chip sample, hornblende-feldspar gneiss, medium-dark-gray, fine- to medium-grained.
- 112R 1 m chip sample, quartz-feldspar-biotite gneiss, medium-gray, fine-grained, minor red garnet.
- 115R 1 m chip sample, interlayered mica gneiss and schist, minor garnet in schist layers, medium-grained.
- 116R 2 m chip sample, interlayered quartz-feldspar-biotite-muscovite-garnet gneiss and schist and quartz-feldspar migmatite, light-medium-gray, medium-grained.
- 117R 1 m chip sample, biotite-quartz-feldspar-garnet schist, fine- to medium-grained, minor iron sulfides.

- GA04-
- 118R 1 m chip sample, quartz-feldspar-biotite-muscovite gneiss, medium-gray, fine-grained, minor iron sulfides.
- 119R 1 m chip sample, biotite-muscovite-quartz-feldspar-garnet schist, medium- to dark-gray, coarse-grained; garnet red-brown, minor magnetite.
- 120R 2 m chip sample, quartz-feldspar-biotite-muscovite-garnet gneiss, light-gray, fine-grained.
- 122R Composite sample of several boulders of granite, light-gray, medium-grained, gneissic.
- 124R 2 m chip sample, quartz-feldspar-biotite gneiss, medium-gray, fine-grained.
- 128R 1 m chip sample, biotite-muscovite-quartz-feldspar-garnet schist, coarse-grained garnet, minor magnetite.
- 135R 1 m chip sample, biotite-muscovite-quartz-feldspar-garnet schist, coarse-grained, minor magnetite.
- 141R 1 m chip sample, hornblende-feldspar-quartz-epidote gneiss, medium-dark-gray, fine-grained.
- 143R 1 m chip sample, biotite-quartz-feldspar-garnet schist, minor sillimanite and graphite, weathered.
- 147R 1 m chip sample, hornblende-feldspar gneiss, dark-gray, fine-grained.
- 148R 1 m chip sample, vein quartz.
- 150R 1 m chip sample, soapstone, talc-chlorite-magnetite-carbonate schist, olive-gray to dark-brown, weathered.
- 201R 1 m chip sample, hornblende-feldspar gneiss, dark-gray, fine-grained, weathered.
- 202R Composite of several boulders of limonitic float, porous mass of quartz and limonite, brown; gossan formed from calc-silicate.
- 203R Composite of several boulders of calc-silicate, quartz-epidote rock, moderate-olive-brown, coarse-grained.
- 204R 1 m chip sample, quartz-feldspar-biotite-garnet gneiss, medium-light- to medium-dark-gray, fine-grained, rare graphite.
- 205R 1 m chip sample, biotite-muscovite-garnet schist interlayered with quartz-feldspar lenses, gray, coarse-grained, minor magnetite.

- GA04-
- 207R Composite sample of several boulders hornblende-feldspar gneiss dark gray, fine-grained, minor quartz-feldspar-epidote layers.
- 209R Composite sample of float, quartz-epidote-magnetite rock; calc-silicate gneiss, fine-grained.
- 210R 1 m chip sample, hornblende-feldspar gneiss, medium-dark-gray, fine- to medium-grained.
- 211R 1 m chip sample, interlayered hornblende-feldspar gneiss and biotite-garnet schist. Gneiss dark-gray, fine-grained; schist coarse-grained.
- 213R 1 m chip sample, biotite schist and hornblende-feldspar gneiss, some epidote, migmatitic.
- 215R 1 m chip sample, hornblende-feldspar gneiss, dark gray, fine-grained, some calc-silicate gneiss layers.
- 217R 1 m chip sample, quartz-feldspar-biotite gneiss, brownish- to medium-gray, fine-grained, migmatitic.
- 218R 1 m chip sample, quartz-feldspar-biotite gneiss, medium-dark-gray, fine-grained.
- 221R Composite sample of float, calc-silicate gneiss; epidote-quartz-hornblende gneiss, granoblastic.
- 222R 1 m chip sample, quartz-feldspar-biotite-garnet gneiss and schist. Schist coarse-grained, gneiss fine-grained, migmatitic. Garnet in schist 0.6-1 cm.
- 224R 1 m chip sample, interlayered biotite-muscovite-garnet-sillimanite schist and quartz-feldspar-biotite-garnet gneiss. Garnets, pink, 1-4 mm.
- 225R 1 m chip sample, hornblende-feldspar gneiss, dark-gray, fine-grained, minor iron-sulfides.
- 230R 1 m chip sample, interlayered biotite-muscovite-quartz-feldspar schist and quartz-feldspar-biotite gneiss. Schist, dark-gray, medium-grained; gneiss fine-grained.
- 232R 1.5 m chip sample, biotite-muscovite-quartz-feldspar schist, minor sillimanite(?), weathered, light-brown, fine-grained.
- 237R 1 m chip sample, quartz-muscovite-biotite schist, minor sillimanite and garnet, weathers grayish-red, medium-grained; garnet sieve-like, 0.5-1 cm.

- GA04-
- 238R Composite sample of several boulders, calc-silicate gneiss, quartz-epidote-carbonate(?) gneiss, weathered, light-brown to olive-gray, fine-grained.
- 240R 1 m chip sample, biotite-muscovite-garnet-sillimanite schist interlayered with quartz-feldspar-garnet-biotite gneiss, dark-gray to tan, medium- to coarse-grained.
- 241R 1.5 m chip sample, hornblende-feldspar gneiss, minor garnet, dark-gray, fine-grained.
- 246R Composite sample of several boulders, quartz vein, barren.
- 249R 1 m chip sample, quartz-feldspar-biotite-muscovite-garnet gneiss and schist, fine-grained.
- 251R 1 m chip sample, quartz-feldspar-biotite gneiss, light-gray, fine-grained, migmatitic.
- 255R 1 m chip sample, biotite-muscovite-quartz-feldspar-garnet gneiss and schist, light- to medium-gray, medium-grained.
- 257R 1 m chip sample, hornblende-feldspar gneiss, minor quartz-epidote veining, minor iron sulfides. Dark-gray to greenish-gray, fine-grained, migmatitic.
- 263R 1 m chip sample, vein quartz, barren, limonite stain.
- 265R 1 m chip sample, talc-schist saprolite, light brown to tan, soft.
- 267R 1 m chip sample, hornblende-feldspar gneiss, dark-gray, fine-grained.
- 268R 1 m chip sample, meta-pyroxenite(?), olive-gray, medium-grained.
- 270R 1 m chip sample, soapstone, talc-chlorite-tremolite(?) schist, light-olive-gray, weathered.
- 271R 1 m chip sample, quartz-feldspar-biotite-muscovite-garnet schist, light-gray, fine-grained.
- 272R 1 m chip sample, soapstone, talc-chlorite-tremolite(?) schist, olive-gray, weathered.
- 402R 0.3 m chip sample, mica schist.
- 404R Grab sample, biotite-garnet-feldspar gneiss.
- 405R Grab sample, garnet-bearing amphibolite.
- 409R 0.15 m chip sample, biotite-muscovite-garnet schist.

EXPLANATION OF TABLE 1

The X and Y coordinates are Universal Transverse Mercator (UTM) grid, zone 17. The X coordinate is the easting value, in meters; the Y is the northing, in meters.

Table 1 lists the results of analyses of all sample media. The letters following the sample numbers designate the type of sample: "C" designates panned concentrates, "D" designates soils, "R" designates rocks, and "S" designates stream sediments.

Iron, magnesium, calcium, and titanium, concentrations are reported in percent (%); all others are in parts per million (ppm). Letters before chemical symbols indicate the method of analysis: S, six-step semiquantitative spectrographic method; AA, atomic absorption. Other symbols on the table are: --, not determined; <, not detected or is below the lower limit of determination, which is number shown; >, amount detected is above the upper limit of determination, which is number shown.

Elements looked for spectrographically but not found, except as noted, are listed below. The lower limits of determination for these elements are in parentheses, the first number is for rock, soil, and stream sediment; the second number is for panned-concentrate samples.

Ag (0.5), As (200; 500), Au (20; 20), Bi (10; 20), Cd (20; 50), Sb (100; 200), and W (50; 100).
